Response to Arguments

- 1. The Examiner acknowledges the cancellation of claims 1-24 and the addition of claims 25-30.
- 2. Applicant's arguments with respect to claims 25-30 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 25-30 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Specifically claim 25 recites "a portrait probability calculating step of multiplying a value corresponding to the human face probably..."

This is indefinite because it does not say what is being multiplied, only one of the values are disclosed which makes the claim indefinite. Claims 29-30 contains a similar sentence and claims 26-28 depend on claim 25.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

10/716,671 Art Unit: 2624

The USPTO "Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility" (Official Gazette notice of 22 November 2005), Annex IV, reads as follows:

Descriptive material can be characterized as either "functional descriptive material" or "nonfunctional descriptive material." In this context, "functional descriptive material" consists of data structures and computer programs which impart functionality when employed as a computer component. (The definition of "data structure" is "a physical or logical relationship among data elements, designed to support specific data manipulation functions." The New IEEE Standard Dictionary of Electrical and Electronics Terms 308 (5th ed. 1993).) "Nonfunctional descriptive material" includes but is not limited to music, literary works and a compilation or mere arrangement of data.

When functional descriptive material is recorded on some computer-readable medium it becomes structurally and functionally interrelated to the medium and will be statutory in most cases since use of technology permits the function of the descriptive material to be realized. Compare In re Lowry, 32 F.3d 1579, 1583-84, 32 USPQ2d 1031, 1035 (Fed. Cir. 1994) (claim to data structure stored on a computer readable medium that increases computer efficiency held statutory) and Warmerdam, 33 F.3d at 1360-61, 31 USPQ2d at 1759 (claim to computer having a specific data structure stored in memory held statutory product-by-process claim) with Warmerdam, 33 F.3d at 1361, 31 USPQ2d at 1760 (claim to a data structure per se held nonstatutory).

In contrast, a claimed computer-readable medium encoded with a computer program is a computer element which defines structural and functional interrelationships between the computer program and the rest of the computer which permit the computer program's functionality to be realized, and is thus statutory. See Lowry, 32 F.3d at 1583-84, 32 USPQ2d at 1035.

4. Claim 30 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter as follows. Claim 30 defines a program embodying functional descriptive material. However, the claim does not define a computer-readable medium or memory and is thus non-statutory for that reason (i.e., "When functional descriptive material is recorded on some computer-readable medium

10/716,671 Art Unit: 2624

it becomes structurally and functionally interrelated to the medium and will be statutory in most cases since use of technology permits the function of the descriptive material to be realized" – Guidelines Annex IV). That is, the scope of the presently claimed a program can range from paper on which the program is written, to a program simply contemplated and memorized by a person. The examiner suggests amending the claim to read "A computer-readable medium encoded with a computer program". Any amendment to the claim should be commensurate with its corresponding disclosure.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.
- 5. The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 25-30 is rejected under 35 U.S.C. 102(e) as being anticipated by Ray et al. (6940545, referred to as "Ray" herein).

Regarding claim 25, Ray discloses an image processing method, comprising: a face probability calculating step of identifying a candidate for a human face region within an image and calculating a human face probability that the candidate for the human face region represents a human face (see the abstract and column 10 line 52 to column 11 line 6 discloses a two step face detection algorithm that first prescreens faces, component W, and then finds a portrait, component S. Column 11 line 8 to column 14 line 11 discloses a face probability calculating step);

a portrait probability calculating step of multiplying a value corresponding to the human face probability and calculating a portrait probability that the image is a portrait; and a judging step of judging whether the image is the portrait by comparing the portrait probability with a threshold value (column 14 line 13 to column 20 line 10 discloses a specific process that looks for faces with in an image. According to applicants specification a portrait is just an image that contains a face, see paragraph 5 under background of specification. The w component checks the data against a threshold as well.)

Regarding claim 26, Ray discloses an image processing method according to Claim 25, wherein said portrait probability calculating step includes a selecting step of selecting higher K human face probabilities from among the human face probabilities calculated in said face probability calculating step and a multiplying step of multiplying

Application/Control Number:

10/716,671 Art Unit: 2624

values corresponding to the selected K human face probabilities (see column 19 lines 2-23 as it discloses a high probability calculating step that takes in many K faces).

Regarding claim 27, Ray discloses an image processing method according to Claim 25, further comprising an image processing step of processing the image in accordance with the result in said judging step (the rejection of claim 1 discloses that the result of threshld helps train the database and applying face detection algorithms in column 19 lines 59-66).

Regarding claim 28, see column 19 line 24 to column 20 line 10 as it discloses saving data to a training module. Also Ray discloses saving and calculating multiple or sub regions in the rejection of claim 25.

Regarding claims 29-30, please see the rejection of claim 25 above as it discloses all aspects of claims 29-30.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Application/Control Number:

10/716,671

Art Unit: 2624

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hadi Akhavannik whose telephone number is 571-272-8622. The examiner can normally be reached on 10:30-7:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian P. Werner can be reached on 517-272-7401. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
